

Introduction

In this assignment, I will be making and testing the website for “mobile world station”

Refinements

For performance, I have compressed the file sizes so it fits on the website, and used youtube embedding links, to reduce file sizes.

Accuracy wise, i have checked for spelling, grammar and tested thoroughly for any constraints and issues, and through user feedback.

Presentation wise, i have kept most things the same, except for the layouts of the website that I have said in assignment 2, mainly due to lack of skill or not being efficient for development.

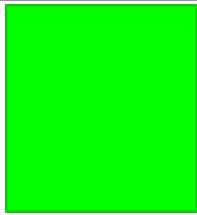

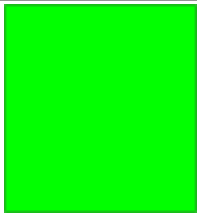

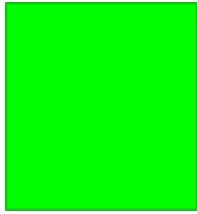

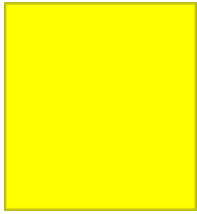

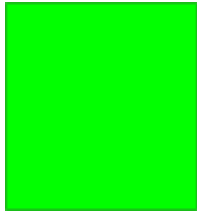

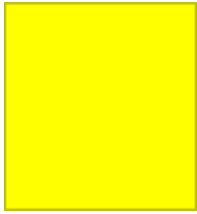

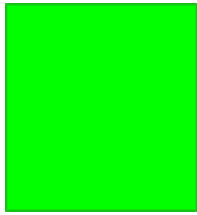

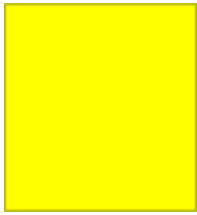

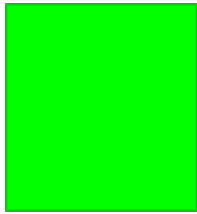

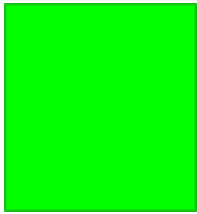

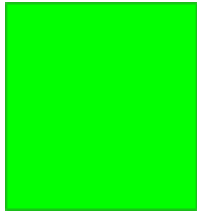

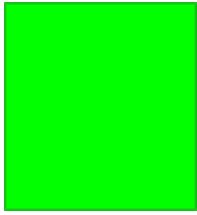

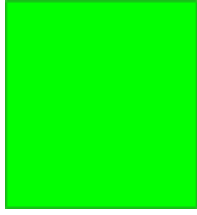

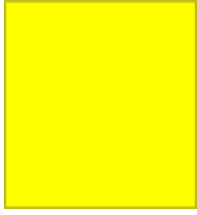

Accessibility wise, i have used alt texts for images, tabs for forms, not-so-straining colors and made the texts large enough for the visually impaired.

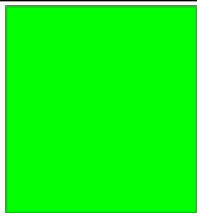

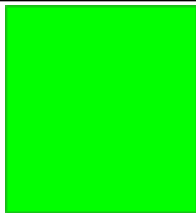

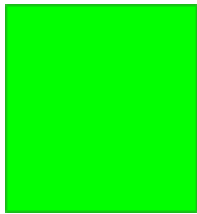

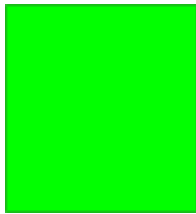

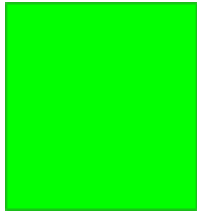

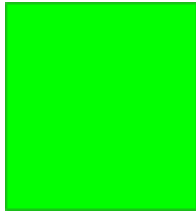

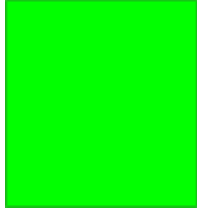

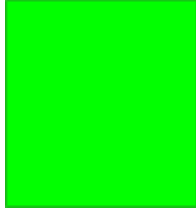

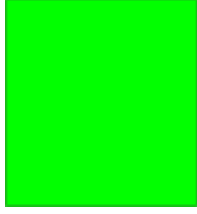

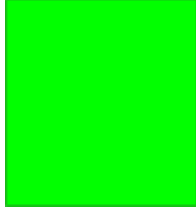

Updated and completed Asset Log

Description of asset	File name	Source	Modifications made	Where used	Where stored

Updated and completed Test Log GREEN=GOOD YELLOW=MEH RED=BAD

Test NO.	Website page/parts	Conclusion	work on 2 browsers	work on 2 systems
1	index.html	Main page works. All images work, hyperlinks work and works on 2 browsers and systems. Android is slightly small, but still bearable.		
2	rec.html	Page works, image all show. Works on both browsers, windows work flawlessly, but android is too small to make it all go in one row.		
3	app.html	Page works, embed shown on both browsers. Windows work very well, but android seems a little off. Embed works and hot spot works.		
4	sam.html	Page works, embed shown on both browsers. Windows work very well, but android seems a little off. Embed works and hot spot works.		
5	sim.html	Table works, all hotspots works accordingly and it has been all layed out. Works on both browsers, works on both systems.		
6	acc.html	Forum works. Images are shown. Page works on 2 browsers and works pretty well on 2 different systems.		
7	ser.html	All hyperlinks works. Page works on both browsers. Windows work but android looks a bit off again.		

8	con.html	Form works pretty well. Page works on both browsers. Windows looks good and android also looks good.		
9	Hyperlinks (all websites)	All websites with hyperlinks work efficiently. They all get sent to new websites and theres no errors or bugs when redirecting.		
10	Hot spots (rec.html,app.html,sam.html ,sim.html)	All websites with hot spots work efficiently. They all get sent to new websites and theres no errors or bugs when redirecting.		
11	Youtube Embeds (app.html, sam.html)	Youtube embedding works on these both pages and they work on android too. Not blocked thankfully.		
12	Other elements (forms, forums, javascript)	The form works, it redirected me to the mailto prompt on both windows and android and the forum redirected me to the external link to get more support. Javascript works flawlessly at the index page.		

User Requirements

This website fits all of the requirements of it, and it includes the following:

- 8 Webpages
- One table
- Consistency use of texts, style and templates
- Interesting designs
- Embedded multimedia assets (youtube videos)
- Interactive features (hyperlinks, hot spots, forms)
- 2 external hyperlinks
- internally linked to other webpages and easy to navigate (aka. has a navigation bar)
- link to an online forum.
- To target the audience (whom like to buy phones)

Explanation of each webpage

index.html (https://22145735.github.io/U13_A3/)

Good Morning, user.

MOBILE WORLD STATION

[Home](#) [Recommended Phones](#) [Apple](#) [Samsung](#) [SIM Deals](#) [Accessories](#) [Services](#) [Contact us](#)

Welcome to Mobile World Station!

My name is Zilvinas, I own this website! This is the website for you where I show you the best ever phones for your budget, best SIM deals, services and support that you can use on Mobile World Station!

Take a look at the phones we want you to buy!	Interested in buying an iPhone? Click here!	Or maybe a Samsung Phone? We got that too!	Or maybe SIM Deals? We also have that too.	Maybe you want to look at the beautiful and trendy accessories?	Maybe you want services? You betcha i have those too!	Maybe you need help with something? We can help out!
---	---	--	--	---	---	--

[Home](#) [Recommended Phones](#) [Apple](#) [Samsung](#) [SIM Deals](#) [Accessories](#) [Services](#) [Contact us](#)

This is the home page of the website. The way this meets the user requirements is because it demonstrates the purpose of the website which is making a decision when buying a mobile phone from this website. And the way this shows that it meets the purpose is giving hyperlinks to the right website for the user to still be interested on, images that are related to the purpose, and giving an simple introduction of the website, where all of these combined, helps improve usability, presentation and accuracy of the website's purpose. The interactivity on this page which i have said on Assignment 2, it has hyperlinks. This helps with quick navigation around the website, both on the navigation bars and on the home page. But, there isnt any hot spots included on the website.

MOBILE WORLD STATION

[Home](#) [Recommended Phones](#) [Apple](#) [Samsung](#) [SIM Deals](#) [Accessories](#) [Services](#) [Contact us](#)

Recommended Phones

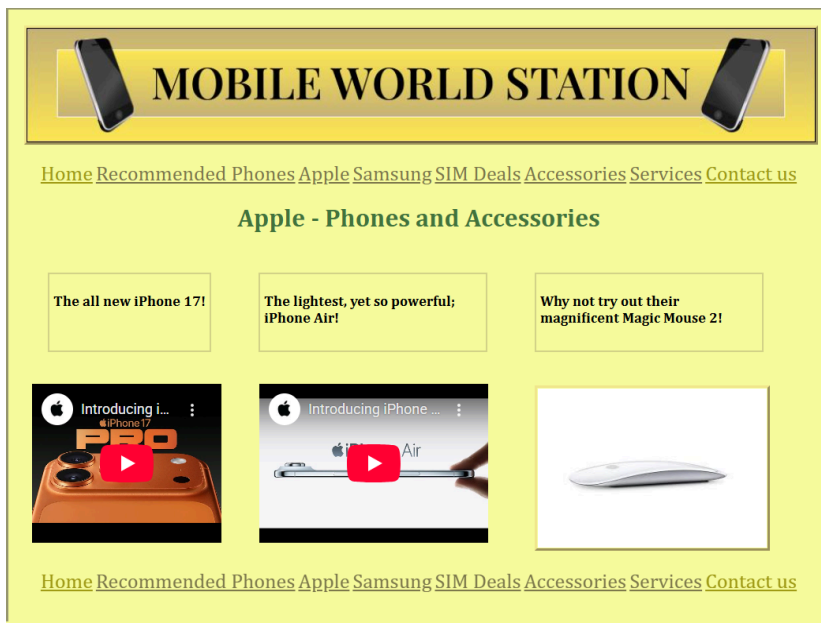

A midrange and a flagship phone are 2 completely different types of phone sold to the phone market. Your iPhone, or your Samsung phones, depending on how recent and how expensive it is, are flagship phones. Flagship phones are high-end phones that shows off the best performance, and features that are built into the phone, but extremely expensive. For example, your iPhone 17 or your Samsung Galaxy S25 are both flagship phones. A Mid-range phone on the other hand, are cheap budget smartphones that includes balanced performance, but not top-of-the-line performance like with the flagship phones. They provide efficient and quick use for phones, but more prone to lag after approximately 3 years after buying a mid-range phone.

If you click on the images, you are going to be sent into a website where it gives you reviews and honest opinions about the phone. The left side are the flagship phones and the right side are the mid-range phones.

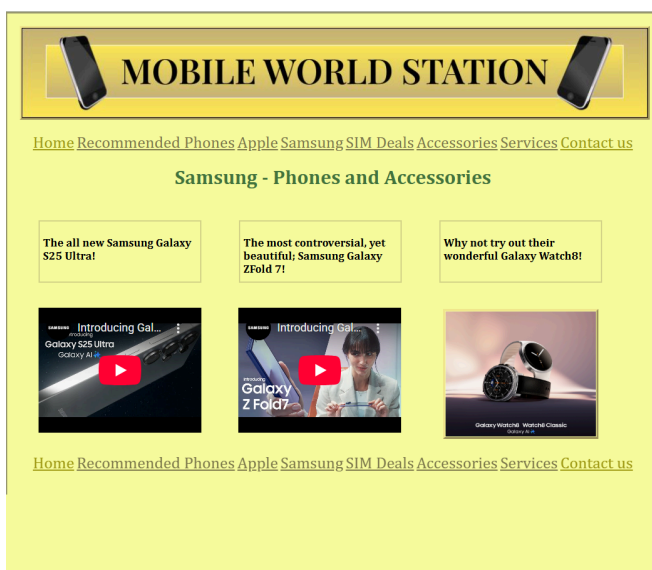

[Home](#) [Recommended Phones](#) [Apple](#) [Samsung](#) [SIM Deals](#) [Accessories](#) [Services](#) [Contact us](#)

This is the Recommended phones page. This website helps the user pick out the right phone to buy. The way this fits the user requirements and the websites purpose is that it helps the user figure out what phone they wanted to buy, with simple explanation of this scale bar, thorough research on the best phone, and stylizing it to make the presentation and usability more improved. If you click on the images, it redirects you to the review of the phone which was sold, which in turn, helps accessibility more. You could also say that this page helps performance too because the coding is easy to understand.

This is the apple page, where I have recommended a few apple products that people in the website can get interested in. This fits with the user requirements because its related to making decisions to phones, and the websites purpose is so that apple users or people who are going to buy apple products, will get decisions on this page. Inside of the website, it includes embedded YouTube videos, where the videos show introductions of the phones on the website, which makes performance, usability and accessibility alot better. The way that performance is better with those videos is that coding would be loads more easier to embed, with the dedicated "Copy embed URL" button when you right click on the video. The way this makes usability better is that the user will get interested in seeing a real version of the phone through a video rather than an image. And the way this helps with accessibility is that the videos will help the people with hearing problems or vision problems to have someone speak to the user about the phone or read about the phones.

[sam.html \(https://22145735.github.io/U13_A3/sam.html\)](https://22145735.github.io/U13_A3/sam.html)

This is the samsung page, where I have recommended a few samsung products that people in the website can get interested in. This fits with the user requirements because its related to making decisions to phones, and the websites purpose is so that samsung users or people who are going to buy samsung products, will get decisions on this page. Inside of the website, it includes embedded YouTube videos, where the videos show introductions of the phones on the website, which makes performance, usability and accessibility alot better. The way that performance is better with those videos is that coding would be loads more easier to embed, with the dedicated "Copy embed URL" button when you right click on the video. The way this makes usability better is that the user will get interested in seeing a real version of the phone through a video rather than an image. And the way this helps with accessibility is that the videos will help the people with hearing problems or vision problems to have someone speak to the user about the phone or read about the phones.

[sim.html \(https://22145735.github.io/U13_A3/sim.html\)](https://22145735.github.io/U13_A3/sim.html)

The screenshot shows a website titled "MOBILE WORLD STATION" with a yellow background. At the top, there are navigation links: Home, Recommended Phones, Apple, Samsung, SIM Deals, Accessories, Services, and Contact us. Below the navigation is a table with three columns: Sim Company, Average SIM Speed, and Price. The table lists four companies: Vodafone, ID Mobile, EE, and giffgaff. Below the table, there is a paragraph of text about Trustpilot reviews for each company. At the bottom, there are four small images of the company logos: Vodafone UK, ID Mobile, EE, and giffgaff.

Sim Company	Average SIM Speed	Price
Vodafone	100MBPS	£40/month
ID Mobile	242MBPS	£16/month
EE	170MBPS	£33/month
giffgaff	125MBPS	£35/month

Vodafone's customer service has been given a 4.6 star rating on Trustpilot because of friendly staff, excellent services and quick support. ID Mobile is given a 4.1 in Trustpilot because of reliable services. However, EE has been given a 1.4 star rating on Trustpilot. But, giffgaff has been given a 3.6 for their quick setup and fair prices.

Vodafone UK, ID Mobile, EE, giffgaff

This is where you can get perfect SIM deals on this page. This is for the people who wants to get a good SIM deals for phones and show that the page is easily laid out. The main thing that makes the page good is the table. This table shows the company that the SIM card is related to, the SIM speeds and the monthly price for the SIM cards. This helps with presentation and accessibility because for presentation, it makes the user interested with this easy layout from that page and it helps the user to understand the content inside of it. For accessibility, it also helps the user read easier with the separated tables and generic text. I have also explained the reviews below that shows the Trustpilot reviews. Although I could actually embed the trustpilot reviews, it would be a constraint because of my skills with javascript and CSS. So, theyre staying as hot spots for now.

[acc.html \(https://22145735.github.io/U13_A3/acc.html\)](https://22145735.github.io/U13_A3/acc.html)

MOBILE WORLD STATION

[Home](#) [Recommended Phones](#) [Apple](#) [Samsung](#) [SIM Deals](#) [Accessories](#) [Services](#) [Contact us](#)

Accessories

This first accessory, is pretty useful. Ever got a hard time holding your phone when its raining or you have sweaty fingers? Use this accessory! This suctions to your hand and you dont to rely on some janky old phone holder and you can use this at glee!

If you have any suggestions, give a shout at this forum!

This next accessory can make your phone really pop out with a beaded charm, get yourself one of these and the men will truly love your aesthetic!

[Link to forum](#)

[Home](#) [Recommended Phones](#) [Apple](#) [Samsung](#) [SIM Deals](#) [Accessories](#) [Services](#) [Contact us](#)

This is where you get news on the most latest accessories that's trending and also something you can put on your phone. The main part which is involved on this page is the forum. This helps with usability because you can navigate yourself to get help on the forum without having to fill out any unnecessary information about yourself. That also fits the user requirements because yet again, it's related to phones and it attracts the user.

[ser.html \(https://22145735.github.io/U13_A3/ser.html\)](https://22145735.github.io/U13_A3/ser.html)

MOBILE WORLD STATION

[Home](#) [Recommended Phones](#) [Apple](#) [Samsung](#) [SIM Deals](#) [Accessories](#) [Services](#) [Contact us](#)

Services

We include car insurance for the people in the website because we help out with car insurance companies like Arnold Clark or Confused.com	We can also provide student deals for the kids going to college or jobs and they want to use some services at a cheap budget.	We also have energy plans for the people who own a home and they want to get cheap energy deals.	And finally, we have mobile insurance for those who are paying for the phone monthly.
Link to car insurance	Link to student deals	Link to energy plans	Link to mobile insurance

[Home](#) [Recommended Phones](#) [Apple](#) [Samsung](#) [SIM Deals](#) [Accessories](#) [Services](#) [Contact us](#)

This is where you can get services like car insurance, student deals, energy plans and mobile insurance. No other decision making websites have a services page like this, which makes it interesting out of the rest and also appeals to the older audience whom may not have insurance or services below the description. In the original design map, i originally layed it out on a diagonal way for the hyperlinks instead of having it straight. But, due to problems with HTML and trying alot to fix up the website to match the original website

design, i gave up and made it into an organised layout instead, which is counted as a constraint. But, since I said it improves on presentation, this one is way more cleaner and organised.

con.html (https://22145735.github.io/U13_A3/con.html)

MOBILE WORLD STATION

[Home](#) [Recommended Phones](#) [Apple](#) [Samsung](#) [SIM Deals](#) [Accessories](#) [Services](#) [Contact us](#)

Contact us

If you want support but you dont have time to email, call or visit, please fill out this form and I will get in touch with you very soon.

Name:

Email:

Message:

But if you have time, you can call me, visit me or email me. Im always here to help. So here are my contact details:

- Name: Zilvinas Macianskas
- Email: zm@a.com
- Phone Number: 416295
- Location: Argoed High School, Bryn-y-baal, Mold, CH76RY

[Home](#) [Recommended Phones](#) [Apple](#) [Samsung](#) [SIM Deals](#) [Accessories](#) [Services](#) [Contact us](#)

This is the contact page, where you can get support and suggest ideas to fix the website. This is useful because it helps me and the user to negotiate and come up with ideas to fix the website OR get support for mobile phones without too much to worry about. But, this isn't the main point. The real main point is the form. This form is made so that you can get easy support to the user by using a "mailto" html link that redirects the user to email me.

This in turn, helps with usability because it directs you to get quick support without any issues whatsoever, which then fills up the user requirements on the website.

Completed User Feedback Forms

Website Review/Feedback Form

Website developed by : Zilvinas Macianskas
for: Mobile World Station

Purpose of the website : To promote mobiles phones, accessories and services.

Site opens and works in browser	Yes
Clear consistent navigation	Mostly, clear but not consistent everywhere
Text is correctly spelt with good grammar	Yes-
All images and content are relevant	Yes
Do you think the website meets the purpose?	Yes, when fixes are applied

Please comment on the overall look of the website	Look really good in most areas a good individual design but some inconsistencies in layout and contact page is quite empty
Please comment on the usability of the website	Mostly easy to use and navigate around, some links are not working
Do you think the website is suitable for my intended audience of; the people who are interested in buying a phone?	Yes, there is relevant and interesting information that cover the user requirements
Suggestions for improvement to the website.	- fix the inconsistent nav bar - Move the greeting from above the banner to the main content area. - Make the contact page a bit more interesting

Review completed by	Neil Wickham	Date	25/11/2025
---------------------	--------------	------	------------

This feedback came from the teacher. They suggest fixing the inconsistency of both websites which are app.html and sam.html, move the greeting from above the banner to the main content area, and make the contact page more interesting. For the inconsistency, i have already found the issue and that the hyperlinks are way smaller than the original text size of the hyperlinks, so what I have done to change this, is that I have removed the hyperlinks that direct me to the page of the phones and accessories to fix this issue, and

then change the text size to fit in the website. And for the contact page, the previous page looked like the description, form and lists are very boring and look untidy. So what i have done, is that i have put the forms on the center, expanded the boxes out a bit more to make it look nicer, and adjusted the description and the list to make it look more better. The only one that I am not changing on this form is the javascript. I feel like this could be better if I move this above the banner to make the presentation better and also to not waste anymore time on the website. But, I have fixed the inconsistent navigation bars on the website and made the contact page better.

Website Review/Feedback Form

Website developed by : Zilvinas Macianskas
for: Mobile World Station

Purpose of the website : To promote mobiles phones, accessories and services.

Site opens and works in browser	Yes
Clear consistent navigation	Relatively though it could be improved
Text is correctly spelt with good grammar	Yes
All images and content are relevant	Yes
Do you think the website meets the purpose?	Yes

Please comment on the overall look of the website	The website could use more colour and things could be spaced out more.
Please comment on the usability of the website	It's usable and meets the requirements for the use of the site.
Do you think the website is suitable for the people who are interested in buying a phone?	I think it is suitable and could definitely help others with buying a phone.
Suggestions for improvement to the website.	A contents menu where you can access all areas of the site in a more consistent and concise manner. Could use more general decoration or stylisation and providing more description to the services and products that are offered.

Review completed by	Daegan Wemyss	Date	25/11/2025
---------------------	---------------	------	------------

This second feedback came from a student in Mold Alun doing A-Level Digital Technology. Although the feedback seems justifiable and reasonable, i will be denying feedback from this one because most suggestions on there has already been finished before the form was sent, like a "contents menu" when you can just use the navigation bar, it does the same thing, and i cannot provide more decoration and stylisation on the website as it may lead to a design constraint and could overwhelm people who are visually impaired, aswell with more detail to the services page and the products being sold in the website would be more of a waste of time and could make no sense if I add more detail to those 2 contents.

Updated Design Documentation

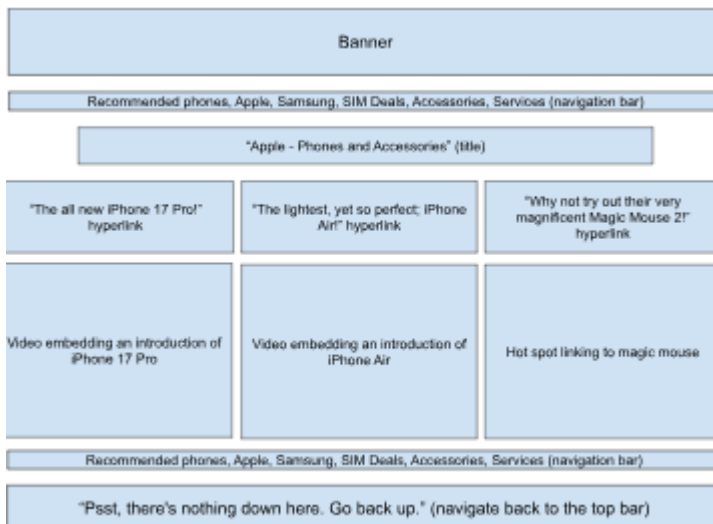

The original design that I have come up with on Assignment 2, has been somewhat changed.

The sitemap has never been changed, no names have been replaced and it has been kept the same. So, the sitemap is justified.

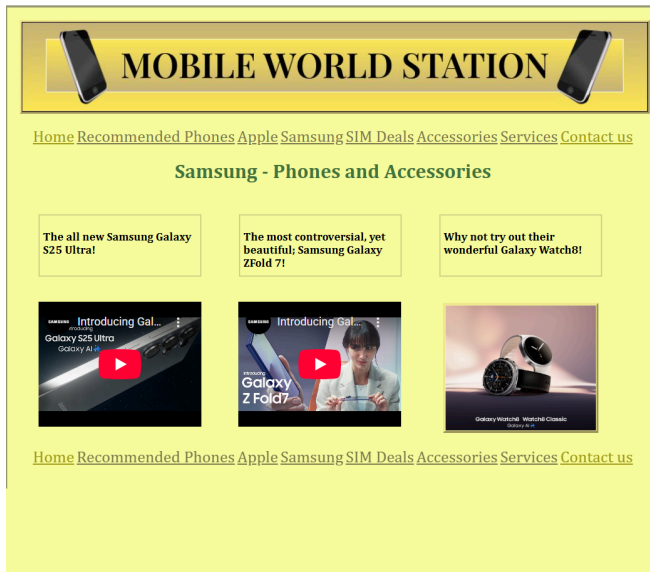

The storyboards however, have changed a lot.

The apple and the samsung storyboards, or app.html and sam.html have changed. I have made the embeds smaller and gapped it by a ton to make it fit into one website, and make it look better. This changed design is justified because it makes the pages look cleaner, and it still makes it fit inside the website with no problems. If the borders were to change, then the website will go unequal and it looks off after changing it. So, I have made the borders smaller to prevent that. It has worked flawlessly, only one problem is that the first text box looks smaller compared to the two other boxes, even though I have added auto-width adjustments to the boxes and it still didn't do that. It isn't a constraint but I justify that this page is useful with the interactivity of this page and make it usable for the user.

Original storyboard design:

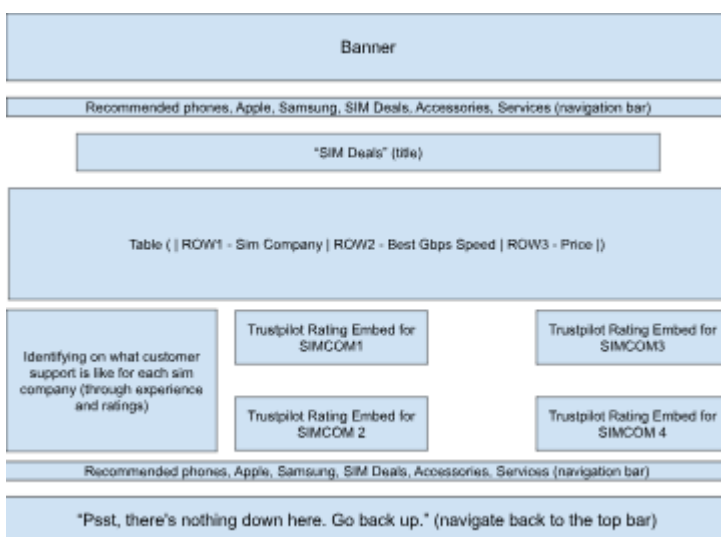

Final page alterations:

For the SIM deals page, or sim.html, my table didn't change a lot, except for the second row name, which is now called "Average SIM Speed" instead of "Best GBps Speed". But the reason why this design is justified and looks perfect is because of the layout below. My plan was to make the trustpilot hot spots separate into 4 different corners at the bottom of the website. The reason why I have not done this is because of a constraint. Whenever I have tried to add the float left element or the margin elements on either hot spots, it wont do that and instead keep it stuck in the right or mess up the pages. This in turn, ruined the presentation because it may look unappealing to the audience and it may look unfinished. So, I have changed the layout of the 4 hot spots to be organised in a row instead of being on 4 sides, which makes the presentation more suitable and justify this website as being useful for the user

Original storyboard design:

Final page alterations:

MOBILE WORLD STATION

[Home](#) [Recommended Phones](#) [Apple](#) [Samsung](#) [SIM Deals](#) [Accessories](#) [Services](#) [Contact us](#)

Sim Company	Average SIM Speed	Price
Vodafone	100MBPS	£40/month
iD Mobile	242MBPS	£16/month
EE	170MBPS	£33/month
giffgaff	125MBPS	£35/month

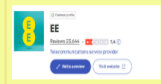

Vodafone's customer service has been given a 4.6 star rating on Trustpilot because of friendly staff, excellent services and quick support. iD Mobile is given a 4.1 in Trustpilot because of reliable services. However, EE has been given a 1.4 star rating on Trustpilot. But, giffgaff has been given a 3.8 for their quick setup and fair prices.

Vodafone UK
Rating: 4.6
Reviews: 10,000
4.6/5

iD Mobile
Rating: 4.1
Reviews: 5,000
4.1/5

EE
Rating: 1.4
Reviews: 1,000
1.4/5

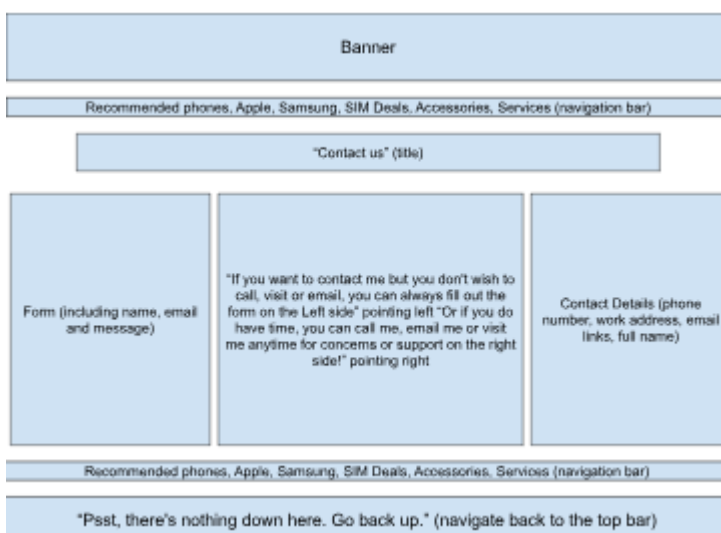

giffgaff
Rating: 3.8
Reviews: 2,000
3.8/5

[Home](#) [Recommended Phones](#) [Apple](#) [Samsung](#) [SIM Deals](#) [Accessories](#) [Services](#) [Contact us](#)

For the contacts page, there was one design constraint which makes the original storyboard plan not justified because whenever I tried to make the forms and the list go into 2 different ways, the website either overlaps all of the elements, or doesn't work at all. Either it could be the script being buggy or my skills being a little low to make this possible. My plan was to make the form go on the left side, and the list on the right side. But due to the constraint, I justify the website as being possible to change, but needs slight alterations.

Original storyboard design:

Final page alterations:

MOBILE WORLD STATION

[Home](#) [Recommended Phones](#) [Apple](#) [Samsung](#) [SIM Deals](#) [Accessories](#) [Services](#) [Contact us](#)

Contact us

If you want support but you dont have time to email, call or visit, please fill out this form and I will get in touch with you very soon.

Name:

Email:

[Home](#) [Recommended Phones](#) [Apple](#) [Samsung](#) [SIM Deals](#) [Accessories](#) [Services](#) [Contact us](#)

The last page, which is the services page, has to be changed due to a constraint which doesn't allow me to adjust the position of the website as shown in the storyboard. But since the storyboard can be deemed unethical and impossible, it can be fixed by organizing the layout in a straight line instead of a diagonal layout. This way, i can justify that the design is ethical for the user and makes presentation a lot better.

Original storyboard design:

Final page alterations:
